HOPE. PROGRESS. OPPORTUNITIES.

They used to have dreams.
Now they have plans.

WE TAKE THE MODERN CONVENIENCES ELECTRICITY PROVIDES US FOR GRANTED.

But many families in remote areas of the world live the simplest of lives. They endure extreme hardships because electricity isn't available.

Beginning with a trip in 2012, Indiana electric cooperative lineworkers spent a month electrifying four Guatemalan villages. Lives were changed – both here and there.

By 2015, the vision grew into Project Indiana and sustainable change – moving beyond electrifying villages to making them a better place to live and enhancing the community – just as happened more than 80 years ago when the electric cooperatives first brought electricity to rural Indiana.

Through Project Indiana, we're empowering global communities one village at a time. And, we know it all begins with electricity – access to better healthcare, fresh drinking water, expanded educational opportunities, economic development and increased public safety.

In the end, it's not only light that Project Indiana brings – it's life, hope, progress and opportunities.

Project Indiana, Inc. is a registered 501c(3) charitable organization. All donations made are tax deductible.
